## Transdermal Delivery System

---

The transdermal application method offers aesthetic professionals an excellent alternative to more invasive techniques when applying active ingredients, whose mode of action directly affects skin cell or tissue components.

There are several non-invasive techniques for administering active ingredients that pass through the stratum corneum to the skin's deepest layers. Enabling diffusion through the dermal tissue achieves a therapeutic effect at the dermal, epidermal and subcutaneous cellular level.

This technique enables the release of active ingredients in the required treatment area without harming the skin, providing fast and long-lasting results. The risk of adverse effects appearing reduces significantly too.

For the face, biorevitalisation aims to increase fibroblast biosynthetic capacity, inducing the reconstruction of an ideal physiological environment. Additionally, it improves cellular activity, hydration, collagen, elastin, and hyaluronic acid synthesis, resulting in firm, glowing, and hydrated skin.

The grand versatility of biorevitalisation resides in the different biologic effects of the active ingredients used. The synergy of different functional ingredients provides more comprehensive skin treatment, acting on several age-related signs caused by both intrinsic and extrinsic ageing factors.

For the body, one of the most in-demand treatments involves silhouette contouring with non-invasive techniques. Patients look for safe and effective procedures that cause less pain, without any discomfort and recovery time.

With INNO-TDS®, INNOAESTHETICS offers aesthetic professionals a complete line of transdermal solutions to prevent and treat the signs of skin ageing and the most common skin disorders.

# INNO-TDS®

In order to develop the INNO-TDS® product formulas, the pharmaceutical company's R&D team carried out a thorough review of the therapeutic effects of different active ingredients to enable the subsequent study and analysis of their combinations. They examined their stability, synergy, original structure conservation, therapeutic efficacy, and application safety.

This work resulted in 13 transdermal solutions, providing deep skin regeneration through the combination of different active ingredients with scientifically proven therapeutic effects that enhance each other.

Clinical evaluation formed an essential part during the product development process too. It enabled the INNOAESTHETICS experts to design application protocols adapted to any skin phototype and biotype, as such ensuring doctors obtain excellent results.

Undergoing a procedure using INNO-TDS® products present many benefits. The procedures are simple, minimally invasive and do not cause discomfort. In addition, they achieve natural, long-lasting and visible results from the first session onwards. Also they do not require recovery time, meaning the patient can return to their everyday activities immediately.

A facial treatment usually comprises 4 sessions. A body treatment comprises 6 to 8. They are performed with an interval of 7 to 15 days to enable the tissue to reconstruct correctly between sessions and to maximise the outcome.

## FACIAL PRODUCTS

INNO-TDS®

### REJUVENATION

Solutions to prevent and treat all signs of skin aging (fine lines, deep wrinkles, sagging skin, dry skin, loss of brightness, etc.)

#### INNO-TDS® TIGF

Provides micronutrients for cells. Ensures availability of the components required for protein synthesis. Enables suitable conditioning for synthesis metabolic reactions.

**Glycine + Proline**

10ml.

#### INNO-TDS® Matrix

Stimulates protein synthesis. Restores connective tissue macromolecules. Improves skin elasticity.

**Pyruvic Acid +  
Hyaluronic Acid**

10ml.

#### INNO-TDS® Fill Up

Generates a potent rebalancing of skin hydration. Improves skin tone and density. Re-establishes elasticity conditions.

**Hyaluronic Acid + DMAE**

10ml.

## FACIAL PRODUCTS

INNO-TDS®

### **MOISTURISING**

Intensive revitalising treatment to recover and maintain skin hydration.

#### **INNO-TDS® Hyaluronic Acid**

Promotes skin biorevitalization, improves fibroblast activity and maintains glucosaminoglycans levels lost within ageing.

*Hyaluronic Acid*

10mL.

INNO-TDS®

### **FAT REDUCTION**

Face contouring treatment. Specifically designed to reduce facial adiposity.

#### **INNO-TDS® Face Nade**

Profiles the volume of the adipose tissue achieving a greater definition of the facial structure and contours.

*Tyrosine + Lecithin*

4ud. x 2,5mL.

## FACIAL PRODUCTS

INNO-TDS®

### ANTIOXIDATION

Treatments to prevent oxidative damage.  
Ensure optimum cellular metabolism.

#### **INNO-TDS® Vitamin Complex**

An excellent micronutrient complement for cells. Enables cell physiological metabolism regulation. Optimal cell functionality. Stimulates regenerative processes.

*Stabilised Vitamins + Minerals*

25ml.

#### **INNO-TDS® Restructurer**

Great free radical control capacity. Homogenises skin colour. Provides UV protection for skin cells. Reduces the harmful effects of nitrogen derivatives. Brings luminosity to the skin.

*Ascorbic Acid + Glutathione*

25ml.

## BODY PRODUCTS

INNO-TDS®

### CELLULITE

Solutions to treat any type of cellulitis (adipose, fibrous, hypotonic and infiltrative).

**INNO-TDS® Cynara Plus+**  
Powerful draining effect. Increases vein tone. Stimulates lymphatic activity. Re-establishes microcirculation.

**Cynara Scolymus + Centella Asiatica**

25ml.

**INNO-TDS® Draining PPC**  
Potent adipolysis action. Reduces the localised adipose volume. Promotes body remodelling.

**Phosphatidylcholine**

25ml.

**INNO-TDS® Slimming**  
Synergic lipolysis activity. Reduces fibrosis processes. Reduces the appearance of cellulite.

**Carnitine + Caffeine**

25ml.

INNO-TDS®

## ANTIFLACCIDITY

Anti-flaccidity treatment to reinforce elastic fibers and increase skin turgor.

### INNO-TDS® Firming

Promote dermal fibers contractions, thereby improving skin elasticity and reducing sagging. Protects cell membranes against free radicals damage.

*DMAE + Silicium*

25ml.

## HAIR PRODUCTS

INNO-TDS®

### **ALOPECIA**

Treatment for all types of alopecia that promotes and maintains healthy hair growth.

#### **INNO-TDS® Hair Loss Control**

Improves male alopecia. Hair loss prevention, hair nutrition and repair. Promotes the growth of new hair.

*Copper Peptides + Pyridoxine*

10mL.

#### **INNO-TDS® Hair Vital**

Improves female alopecia. Nourishes and stimulates hair follicle to favour anagen phase.

*Sulphur Amino Acids + Coenzymes*

10mL.

## *CLINICALLY PROVEN RESULTS*

---

INNOAESTHETICS treatment results are endorsed by clinical trials.

Before and after photos of two cases of androgenic alopecia treated with **INNO-TDS® HAIR LOSS CONTROL** in the framework of a clinical study carried out following a protocol of 8 sessions performed with an interval of 7 days.

### **MALE ANDROGENIC ALOPECIA**

# INNO-TDS<sup>®</sup>

- 13 transdermal application solutions
- Safe and highly effective
- Proven synergy of active ingredients
- Programmed, constant and sustained release
- Correct conveyance
- Great stability and conservation
- Easy application
- Minimal adverse effects

## Anti-ageing

Powerful actives that reduce skin ageing signs. Restore skin elasticity and complexion regularity and homogeneity.

## Moisturising

Provides deep skin regeneration, revitalization and moisturizing.

## Firming

Reduces sagging skin and enhance skin density.

## Adiposity

Treats any type of cellulitis (adipose, fibrous, hypotonic and infiltrative).

## Alopecia

Promotes and maintains healthy hair growth.
